Tooth Wear of Permanent Teeth Simplyteeth

November 12th, 2018 - 2 How teeth can be worn down by other teeth

Attrition is the mechanical wearing down of the biting and chewing surfaces of teeth. The tooth-to-tooth contact during chewing grinds down the surfaces. The back teeth become flatter and the front teeth become shorter. This type of tooth wear takes place in all mouths and is part of the normal ageing process. Severe attrition of the front teeth will have a disfiguring effect on the face.
